SUBJECT: Certification for Industry Canada

Hi,

FINALLY, we are approved & can CERTIFY PRODUCTS for CANADA!!!!

You can get the application guide and the Appendix I & II forms from our web site.

In order for us to accept your applications you must be considered to be competent to perform the desired measurements as:

- 1) For measurements where an OATS is required, the laboratory must have their OATS listed with Industry Canada.
- 2) You also must have a Canadian Agent/Maintenance facility.

Other than the above, the requirements are the same as submissions to IC and are outlined in RSP-100. You can download (for free) the IC standards from the following web site:

http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/vwGeneratedInterE/h_sf06139e.html

We are APPROVED as a FCB.

As I am writing this email we are issuing Certification for Canada. Check it out we are listed on the IC website, <http://spectrum.ic.gc.ca/~cert/> Today we issued several Certifications. Ask about our prices & lead time.

If you want to be removed from this distribution please let me know.

Best Regards,
Sid Sanders

EMC/Radio testing and TCB/NB&CAB for worldwide certification services
